

Redesigning CDC Adult Obesity Prevalence Maps

From repeated static maps to interactive comparison

ORIGINAL CDC VISUALIZATION

Strength preserved

The map clearly shows geographic patterns within each population group.

THREE TASK GAPS

01 Repeated maps

Scrolling and memory make subgroup comparison difficult.

02 Cross-group exploration

Different populations are separated across the page.

03 Imprecise comparison

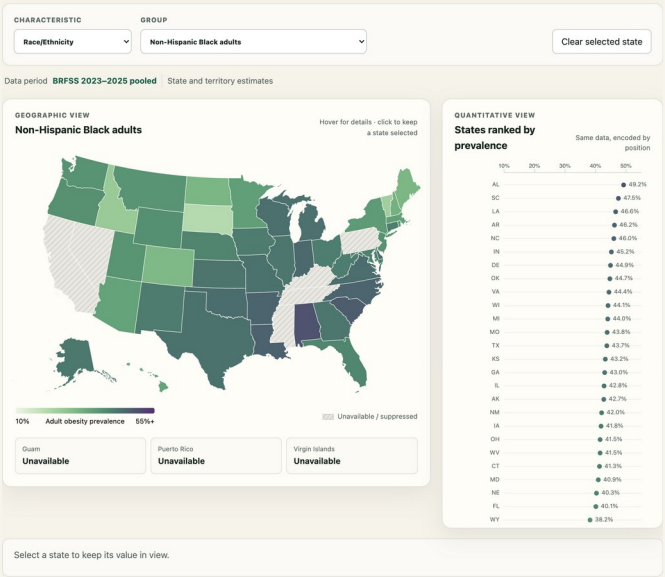

Color and geographic area make exact state comparison difficult.

INTERACTIVE D3 REDESIGN

REDESIGNED VISUALIZATION

One geographic frame, multiple population views

The map emphasizes where patterns occur. The ranking uses aligned position to show which states are higher or lower, and by how much.

One persistent map

Switch groups without losing geographic context.

Demographic selectors

Explore age and race/ethnicity directly.

Linked state ranking

Dot plot and tooltip support precise comparison.

Map = WHERE are the patterns? • Dot plot = WHICH states are higher, and by HOW MUCH?
